Session 7 :

Critical Render Path :

- If our CSS file is too big, our website would slow down.
  - Avoid making a big bulky CSS file -> Minifying the CSS -> Visit [Link](#) -> what this tool does is deletes all the white spaces and converts the whole code into one line.
- If we have some references to some specific fonts (explained before : refering to Google Font)
  - Have our own font file on the server next to the CSS file.
